

GEOS

Geomatics Student Association

Dear Geomatics students, alumni, staff,

GEOS hopes you had a great summer and are ready for all the fun we have prepared for the next year! This is the only newsletter that will be sent out to not only to GEOS members, but all current Geomatics students. If you wish to continue getting it, please respond to this email or, better, become a member of GEOS.

Greetings,
GEOS board 2017

Events

Drinks with Deltares

September 12, 18:00-21:30
Meeting point: Geolab, BG.Oost.450

Are you interested in Infrastructure, flood risk, environmental studies and natural resource management? Get to know more about these during the dinner and drinks with Deltares. On top of that you get to see the insides of their facilities at the South of the TU Delft campus.

Enginear Workshop "Presenting yourself online & offline and network skills"

September 18, 16:00-17:45
Meeting point: Room C

On Monday the 18th of September in the afternoon an interactive workshop will be held for all Geomatics students. The workshop is organized in collaboration with Enginear, a company that helps students and starters with their careers in the field of engineering. It is an interesting workshop for all Geomatics students to learn networking skills and to profile yourself in order to find a good job or internship in the geospatial industry! Next to that, it is – for the first year students – a good preparation for the Intergeo trade fair in Berlin! Furthermore, Enginear gives you the opportunity to get your CV checked. And last but not least, it is all for free!

For more information and to sign up, please use this link:

Intergeo trade fair in Berlin

September 27 & 28

The Intergeo trade fair is a meeting point for experts and decision makers from the world of politics, science and the industry from all over the world. It focuses on the geospatial community and is with more than 550 exhibitors from over 30 countries and more than 17.000 visitors a HUGE event. This year the trade fair is held in Berlin, Germany. Since the start of the Geomatics master program the first year students will get the opportunity to visit Intergeo on your own occasion. You won't miss classes since the schedule is slightly adapted this week. We as GEOS board really advice you to visit this three-day event, because it will give you a very good impression of the companies in the geospatial field. Next to that, it is a mid-week of fun in the impressive city of Berlin with your fellow students!

More information about Intergeo will be given to you in the first weeks of the Geomatics program.

In the meantime, you can visit their website (<http://www.intergeo.de/intergeo-en/>) and look for cheap traveling tickets and a nice hostel in the city!

Tensing FME workshop

October 6
Location: TBD

FME desktop or the so-called "Swiss army knife" for data processing is a tool extensively used both in the education of Geomatics and the commercial sector in the Netherlands. Flow programming based software will allow you to easily process the vast amounts of 2D data, but also incorporated it together with 3D point clouds and CityGML models. This workshop will teach the complete beginners the basic know-how's and will provide some handy new tricks for the more experienced users.
